

## AMENDMENTS TO THE CLAIMS

Claim 1 (currently amended): A ~~light emitting device, said device~~ comprising:

a first transparent substrate having a first surface and a second surface;  
~~— a conductive transparent layer disposed on said first surface of said substrate;~~  
~~— an organic layer disposed on said conductive oxide layer; and~~  
~~— a top contact disposed on said organic layer;~~  
an OLED disposed on the first surface of the first transparent substrate;  
a second transparent substrate having a first surface and a second surface, wherein the first surface of the second transparent substrate is attached to the second surface of the first transparent substrate;

wherein a contour of ~~said second surface of said substrate is caused to assume~~ the second surface of the second transparent substrate has a non-planar non-planar form.

Claim 2 (original): The light emitting device of claim 1 wherein said non-planar form is spherical.

Claim 3 (currently amended): The light emitting device of claim 1, wherein ~~said second surface contour is caused to assume a non-planar form by moulding said substrate surface~~ the second surface of the second transparent substrate is molded.

Claims 4-20 (canceled).

Claim 21 (new): The device of claim 1, wherein the first surface of the second transparent substrate is attached to the second surface of the first transparent substrate with index matching gel.

Claim 22 (new): The device of claim 1, wherein the second surface of the second transparent substrate has a non-planar form because lenses are attached to the second surface of the second transparent substrate.

Claim 23 (new):        A method of fabricating a device, comprising:  
                         providing a first transparent substrate having a first surface and a second surface, and  
having an OLED disposed on the first surface of the first transparent substrate;  
                         providing a second transparent substrate having a first surface and a second surface,  
wherein the second surface of the second transparent substrate is non-planar;  
                         attaching the second surface of the first transparent substrate to the first surface of the  
second transparent substrate.

Claim 24 (new):        The method of claim 23, wherein the second surface of the second  
transparent substrate includes spherical shapes.

Claim 25 (new):        The method of claim 23, wherein the second surface of the second  
transparent layer is molded.

Claim 26 (new):        The method of claim 23, wherein the first surface of the second  
transparent substrate is attached to the second surface of the first transparent substrate with index  
matching gel.

Claim 27 (new):        The device of claim 23, wherein the second surface of the second  
transparent substrate has a non-planar form because lenses are attached to the second surface of  
the second transparent substrate.
